The lay-out for this custom playscape, design number FC12-702E, has been configured to meet the requirements of the CAN/CSA-Z614-07 standard. In addition, each of the above components listed as "Certified" have been tested and are IPEMA certified. Components listed as "Not Applicable" do not fall within the scope of the CAN/CSA-Z614-07 standard and have not been tested. IPEMA certification can be verified on the IPEMA website, www.ipema.org. In the interest of playground safety, IPEMA provides a Third Party Certification Service which validates compliance.

Installation Times
Installation times are based on one experienced installer. A crew of three experienced individuals can perform the installation within the given time, each member working 1/3 of the given hours. [Eg. Installation Time = 30 hours. For a crew of three, each member will work 10 hours on the installation for a total of 30 hours on the project.]

Carbon Footprint
The CO2e (carbon footprint given in Kilograms and Metric Tons) listed above is a measure of the environmental impact this play structure represents from harvesting raw materials to the time it leaves our shipping dock. Playworld Systems nurtures a total corporate culture that is focused on eliminating carbon producing processes and products, reducing our use of precious raw materials, reusing materials whenever possible and recycling materials at every opportunity. Playworld Systems elected to adopt the Publicly Available Specification; PAS 2050 as published by the British Standards Institute and sponsored by Defra and the Carbon Trust. The PAS 2050 has gained international acceptance as a specification that measures the greenhouse gas emissions in services and goods throughout their entire life cycle.

Pre-Consumer Recycle Content
A measurement, in pounds, that qualifies the amount of material that was captured as waste and diverted from landfill during an initial manufacturing process and is being redirected to a separate manufacturing process to become a different product. E.g. 100% of our Aluminum Tubing is made from captured waste material during the manufacturing process of extruded Aluminum products such as rods, flat bars and H-channels.

Post-Consumer Recycle Content
A measurement, in pounds, that qualifies the amount of material that was once another product that has completed its lifecycle and has been diverted from a landfill as a solid waste through recycling and is now being used in a Playworld Systems' product. E.g. **20% to 40% of the steel in our steel tubing and sheet steel have been diverted from landfills. Automobiles are scrapped and recyclable steel is purchased by the steel mill that produces our raw product.** The amount of Post-Consumer recycled steel fluctuates daily based on the availability of the recycled steel.
NOTE: THIS DESIGN MEETS ADA REQUIREMENTS WITH THE ADDITION OF 2 GROUND-LEVEL PLAY COMPONENTS OF 2 DIFFERENT TYPES.

**INSTALLATION NOTES:**

1. Paved surfaces, such as asphalt and concrete, are not acceptable for use under your structure.
2. It is the consumer's responsibility to check with local utilities prior to excavating footings for any underground utility lines that may exist within the installation area.
3. It is the consumer's responsibility to check local soil conditions and drainage within the site area. Inquire with local contractors for appropriate recommendations.
4. If the structure is to be installed across uneven terrain, maintain the support post mark for protective surfacing level at the lowest grade. Adjust other footings accordingly.
5. The base of footings must be below frost lines.
6. Do not encase the bottom of support posts in concrete. Place all posts directly on packed soil.
7. Assemble the entire structure before pouring concrete unless specifically instructed to do so in the individual component Installation Instructions.
8. Read completely the Installation Instructions provided with your structure prior to beginning construction.

**SITE NOTES:**

1. The site plan provided must be checked against the actual site area to ensure that placement of your structure meets required clearances.
2. The dimensions labeled are for location of footing holes, not exact placement of equipment, Assembly, plum, and level equipment before pouring concrete.
3. There must be a minimum distance of 8' (1830mm) between any obstacle, sidewalk, etc., and your structure.
4. Skids must have a use zone that extends out from the lower end section of the skids a distance that at least 8' (1830mm) or equal to the vertical distance from the highest point of the sloping surface to the top of the protective surfacing, whichever is greater. The skids use zone should not extend greater than 8' (2438mm) from the end of the lower end section.
6. Supervise children as they play.
